Software Requirements Specification (SRS)

1. Project Information

Project Name: RestaurantGo
Project Type: Restaurant Food Ordering Mobile Application
Platform: Mobile / Expo
Technology: React Native, TypeScript, Expo Router
Storage: AsyncStorage

1.1 Purpose

RestaurantGo is a mobile application that allows customers to browse restaurants, view food menus, add items to a cart, place orders, manage favorites, and manage their profile and delivery information.

1.2 Scope

The system provides a simple food ordering experience from restaurant selection to order placement. It also provides user authentication, favorites, order history, profile management, and local data storage.

---

2. Functional Requirements

FR-01: User Authentication

- User can create an account.
- User can log in and log out.
- User can update profile information.

FR-02: Restaurant Browsing

- User can view available restaurants.
- User can search for restaurants.
- User can view restaurant details and menus.

FR-03: Cart Management

- User can add food items to the cart.
- User can increase or decrease quantities.
- User can remove items.
- System calculates subtotal, delivery fee, and total.

FR-04: Checkout and Ordering

- User can enter/select delivery information.

- User can select a payment method.
- User can place an order.
- System generates an order ID.
- System displays order confirmation.

FR-05: Order Management

- User can view previous orders.
- User can view order items, total, payment method, delivery time, and status.

FR-06: Favorites

- User can add restaurants to favorites.
- User can remove restaurants from favorites.
- Favorite data is saved locally.

FR-07: Profile and Address

- User can view and edit profile information.
- User can save delivery address and phone number.

FR-08: Theme

- User can switch between light and dark theme.

---

3. Non-Functional Requirements

NFR-01: Usability

The application should have a simple, clear, and user-friendly interface.

NFR-02: Performance

The application should respond quickly to normal user actions such as searching, adding items, and navigating between screens.

NFR-03: Reliability

User, favorite, order, and address information should remain available after restarting the application through local storage.

NFR-04: Maintainability

The application should use reusable components and separate modules for authentication, cart, favorites, theme, data, and state management.

NFR-05: Compatibility

The application should run in the Expo/React Native development environment and on supported mobile platforms.

NFR-06: Security

User information should not be exposed unnecessarily. The current MVP uses local storage and does not implement a production backend or real payment security system.

---

4. Main System Modules

The main modules of RestaurantGo are:

- **Authentication**
- **Restaurant & Menu**
- **Cart**
- **Checkout & Orders**
- **Favorites**
- **Profile & Address**
- **Theme Management**

---

5. Limitations

- No real backend server.
- Authentication is local/demo-based.
- Payments are simulated.
- Restaurant and menu data are predefined.
- Order information is stored locally.
